Company Info

Who?

BrickHost staff consists of experienced IT technicians, programmers and designers. Launched on June 1, 2003 we bring a fresh approach to hosting and offsite data-backup. However, while BrickHost itself may be a new company, BrickHost staff have been hosting websites for over 5 years, and have only recently re-branded the company as we move forward and expand into offering solely web hosting services. With extensive experience in the IT industry and years of experience, BrickHost staff realizes the importance of high quality web hosting and data backup services. We've worked with other companies, and have been hosting and data backup clients ourselves. Having seen both sides, we know what works, and what clients need in order to experience a seamless web hosting.

Why?

As business and the general public become more dependent on the internet, email, ftp, and integrity of electronic data, reliable and fast accessibility becomes more and more important. A missed email, or lost file can be worth hundreds, thousands, or even tens of thousands of dollars. BrickHost realizes the importance of your communications, data and websites availability. With our state of the art servers, and hundreds of peering connections to the Internet you are guaranteed 99.9% uptime. Our offsite data backup solutions can provide peace of mind, as you are assured that your data is safe from flood, fire, terrorism and even human error.

How?

BrickHost is able to offer an unparalleled level of service and cost effective hosting solutions through our dynamic business strategies. We maintain a small staff of highly skilled professionals. We realize the importance of a functional working relationship with our clients. It's for that reason that we're available instantly 24 hours a day. Our staff will work with you, to realize the potential of the Internet and the security of offsite data backup in order to help your business succeed and grow.

Where?

With servers located in the NAC Data Centre and peering connectivity BrickHost has unparalleled high speed connections to computers and servers around the world. For more information on our network and servers please click on the Server or Network page. BrickHost features a secure data vault based in Thunder Bay, Ontario. This secure, and remote location is an excellent repository for your files. Without the threat of flood, tornadoes, hurricanes or terrorism, you can rest assured that your data is secure. BrickHost's corporate head office and data vault is located on the second floor of the Royal Bank Building, a secure class B building, at 620 Victoria Avenue East, Thunder Bay, Ontario, P7C 1A9, Canada.
